Who We Are

JOCES is a Multi-Disciplinary Civil Engineering Consultancy firm specialising in Road, Stormwater, Flooding, Traffic and Development Consents for Local Governments.

We are on the Local Government Procurement (LGP) Consulting Services panel, making it easy for NSW councils to engage us directly.

We pride ourselves on our deep Local Government knowledge and our commitment to community benefits and long-term sustainability.

LOCAL GOVERNMENT PROCUREMENT
APPROVED CONTRACTOR

VISION

To establish ourselves as the go-to Civil Engineering consultant for Local Government and businesses seeking impactful and sustainable outcomes through trusted advice and engineering innovation.

MISSION

To create lasting impact through engineering solutions that combine industry best practice,
our commitment to continuous improvements, innovation and community values.

Why Choose Us

01.

Decades of Local Government Experience

With decades of experience working with Local Governments across NSW, we understand your processes, priorities, and challenges. We know how to navigate challenges and deliver practical outcomes for you.

02.

Multi-Disciplinary Civil, Stormwater, Flooding and Traffic

You don't need to juggle multiple consultants - everything from stormwater, flooding, and traffic can be handled under one roof, allowing for strong internal collaboration between disciplines and tailored expertise for each component.

03.

Results Driven

Every job is driven by outcomes, guided by industry best practice, and strengthened by our commitment to continuous improvement and staying ahead of industry trends.

04.

Community Focus

We bring engineering expertise with a community focus, working with you to create lasting value for the communities we serve.

Our Services

Capital Works and Infrastructure

Flood Risk Assessment

- Simulate Flood Behaviours, using DRAINS, HEC-RAS 2D and TUFLOW.
- Flooding Impact Assessment.
- Review against Council's flooding prescriptive controls.
- Recommend mitigation measures.
- Culvert Sizing.

Stormwater and Road Design

- Stormwater Drainage Design.
- Water Sensitive Urban Design (WSUD).
- On-Site Detention (OSD) Basin/Tank Design.
- Strategic, concept and detailed road design.
- Footpath and Cycleway design.
- Driveway Crossover Design and Vertical Clearance Check.
- Car Park Design.
- Subdivision design.
- Expert Witness Services.

Post Consent Support

- Section 68.
- Section 138.
- Subdivision Works Certificate.
- On Site Hold-point Civil Inspections.

Other Services

- Infrastructure Input for Planning Proposals.
- Pre-Lodgment Advice.
- Engineering Design Specifications and DCP Review.
- Peer-review Services.
- Expert Witness Services.

Development Engineering

Development Application

- Development Application
- Engineering Referral Response for Local, State, Regionally Significant Development.
- Development Engineering Consent Review covering: Traffic, Access, Stormwater, Flooding.
- Section 4.55 Modification.
- Section 8.2A.
- Section 68.
- Section 138.
- Subdivision Works Certificate.
- On Site Hold-point Civil Inspections.
- Infrastructure Input for
- Planning Proposals.
- Pre-Lodgement Advice.
- Engineering Design Specifications and DCP Review.
- Peer-review Services.
- Expert Witness Services.

Traffic Capabilities

Traffic Engineering

- Traffic and Parking Impact Assessments.
- Road Safety Audits.
- Intersection Design.
- CPTED Reports.
- Cycleway and Active Transport Design.
- Car Parking Layout and Compliance Design.
- Swept Path Analysis.
- Traffic Expert Witness Services.

Transport Planning

- Active Transport Plans.
- PAMPs.
- LATM Design

DEVELOPMENT WORKS CARRIED OUT FOR COUNCILS

WINGECARRIBEE COUNCIL

01.

Challenges

Our clients faced critical staff shortages and overwhelming volumes of applications, particularly during COVID. We were able to fill this gap for Council.

Solutions and Scope

01. We provided ongoing development engineering support for various types of applications, Development Applications, post-consent applications and inspections.

02. We provided a multi-disciplinary engineering team and coordinated with Council to ensure consistency in engineering advice.

KEY METRICS

- **› 3000** Total Applications recorded
- **› 950** Development Applications
- **› 500** Section 68 Applications
- **› 600** Section 138 Applications

Benefits

01. Setting benchmarks in service excellence by consistently exceeding client expectations.

02. Greatly improved assessment timeframe across various applications.

03. Cleared out Section 138 backlog within 1 year and transitioned some of these roles to Council's internal staff.

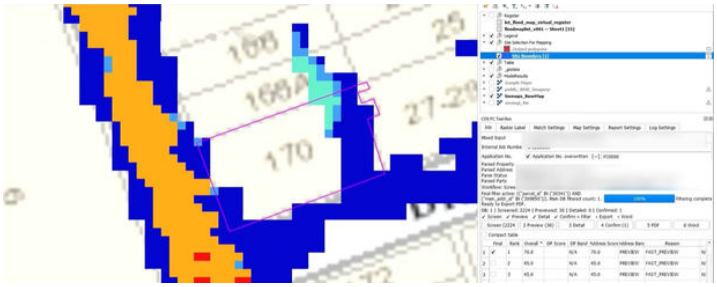

04. Achieved regular and consistent outputs.

CITY OF SYDNEY
PROVISION OF FLOOD INFORMATION CERTIFICATE

02.

Challenges

The City of Sydney wanted assistance in providing Flood Information Certificates, that provides greater detail at a site-specific level than catchment-level PDF maps without the need for specialised software and expertise to interpret the flood models..

Solutions and Scope

01. We provide flood information certificates by building a QGIS and Python system that maps flood hazard and fills in each certificate automatically

02. We merged the flood models for all 8 catchments into one LGA-wide dataset for the 5% AEP, 1% AEP and PMF events, converted to GDA2020.

03. A controlled SOP with multi-step QA. An NER-registered hydraulic engineer checks and signs off every certificate

Benefits

01. One consistent flood dataset across all 8 catchments. A property's flood results can be pulled out almost instantly.

02. A clear audit trail - a monthly register is issued for the certificates issued.

03. Less risk of human error and administrative work through automation and registered engineer sign-off.

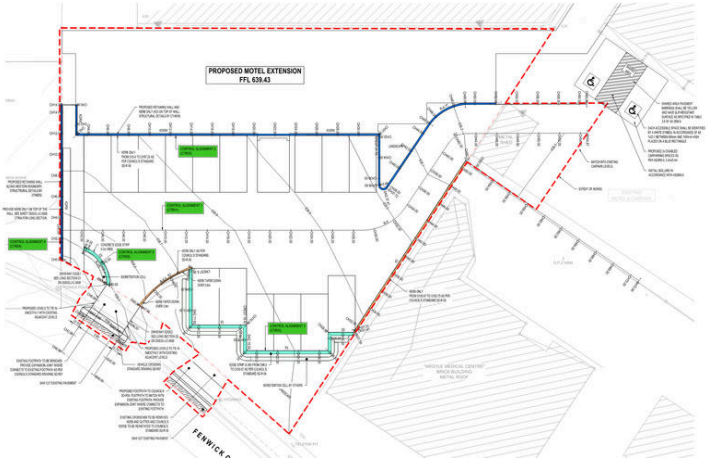

04. A monthly register is issued with each invoice, plus quarterly report meeting to Council.

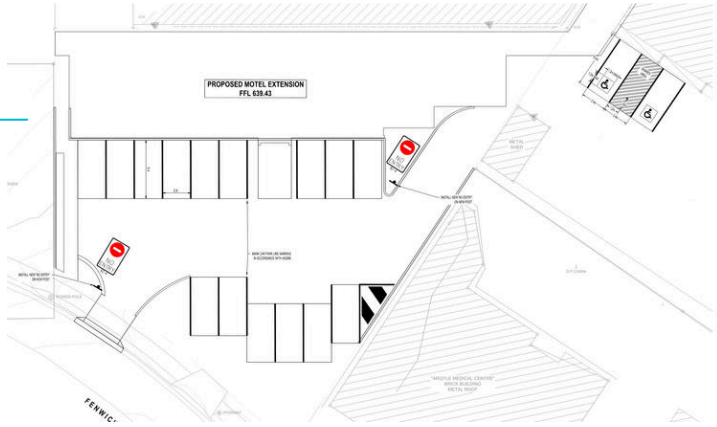

03.

POST HOUSE MOTEL CARPARK UPGRADE

Challenges

Different consultant team at DA stage. Significant cut proposed and approved at DA stage, resulting in multiple engineering iterations to minimise cut and fill.

Solutions and Scope

01. Provide detailed design for AS2890.1 compliant carpark servicing the motel extension.

02. Detailed Civil Design, Signage and Linemarking Plan, Driveway Vertical Clearance Check.

03. Delivered in 12d Model and AutoCAD

04. AS2890.6 accessibility carpark space compliance

KEY RESULTS

01. Mimised fill volume and cost through optimised grading and design refinement

02. Consistent communication with the client and architect throughout design development

HASTINGS PARK GPT AND BASIN UPGRADE

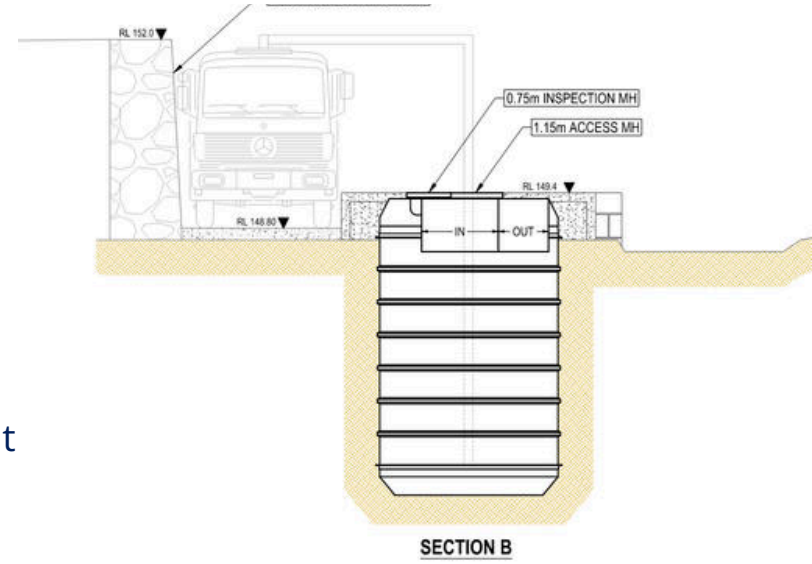

04.

Challenges

Existing 500mm trash rack was ~80% blocked during site inspection, restricting flow and reducing treatment efficiency.

Large 29.4 ha residential catchment (~60% impervious) discharging via 1650mm RCP
into treatment system.

Existing infrastructure lacked adequate debris management and long-term maintenance access

SECTION B

Scope

01. Stormwater Management Plan including stormwater quality WSUD, layout and details.

02. DRAINS, MUSICX, AutoCAD.

Solution

Atlan Vortceptor GPT system with a custom arrangement of low flow and high flow bypass system.

KEY RESULTS

01. All assessed GPT units achieved significant pollutant load reductions compared to existing trash rack configuration.

02. Gross Pollutant reduction exceeded 96% across all options.

03. Hydraulic modelling confirmed reduced HGL and peak flows up to 5% AEP, with no adverse upstream impacts

05. CARINGBAH SOUTH

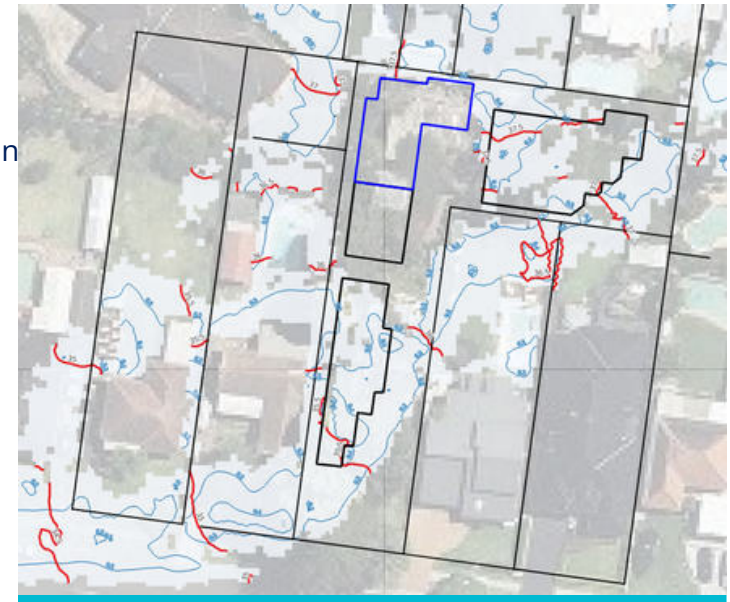

Challenges

Large 3.5m wide Council's drainage easemen through
the site.

Significant catchment contributing to overland flow.

Significant existing overland flow extent.

DA has various objections in relation to flooding by neighbouring properties.

Solutions

01. Stormwater Management Plan including stormwater quality WSUD, stormwater layout and OSD design.

02. Flood Risk Assessment Report and Modelling.

03. Respond to Council's RFI Letter.

04. DRAINS, TUFLOW, MUSICX, CIVIL 3D.

KEY RESULTS

01. Stormwater Plan delivered within 2 weeks.

02. Flood Risk Assessment Report delivered within 4 weeks.

03. Constant communication with the client and architect during the Stormwater and Flood Modelling development.

04. Proposed a solution without any flood impact to adjacent properties.

GLAISHER PARADE CRONULLA EXPERT WITNESS

06.

Challenges

- The car lift, swept paths and compliant basement access to AS2890.1
- Stormwater works below the Foreshore Building Line
- A basement passing bay near high-value trees
- Loss of on-street parkings from the design of the driveway crossings
- The stormwater connection to Council's drainage system

Scope

01. Two Houses Proposal with Basement Carpark.

02. Civil Engineering Expert Witness on behalf of Sutherland Shire Council

03. Joint Expert Conferencing and preparation of Joint Expert Evidence

04. Clear technical position presented to the Court on behalf of Council

KEY RESULTS

01. Access, parking and stormwater contentions resolved through joint conferencing.

02. Car lift, swept path and support column issues resolved.

03. Stormwater redesigned to stay clear of the Foreshore Building Line, confirmed with a DRAINS review and pump checks.

04. Practical amendments agreed, including the slab, swept paths and pit layout.

07.

JASMINE AVENUE QUAKERS HILL FLOODING & CIVIL

Challenges

The site is affected by mainstream and overland flow.

Building envelopes were set so there are no offsite flood impacts, and no cut and fill is proposed.

Difficulties with coordination with the WSC and existing vegetation

Post-Development 1% AEP Depth and Levels, including Mainstream and Overland Flow.

Solutions

01. Flood Risk Assessment Report using the Eastern Creek TUFLOW flood model.

02. Building envelopes set so there is no offsite flood impact, with no cut and fill proposed.

03. Stormwater Management Plan covering stormwater layout, OSD and WSUD stormwater quality design.

04. Response to Council's Request for Information (RFI).

Software: DRAINS, TUFLOW, MUSICX and Civil 3D

KEY RESULTS

01. Blacktown Council approved the DA for the 3-lot subdivision

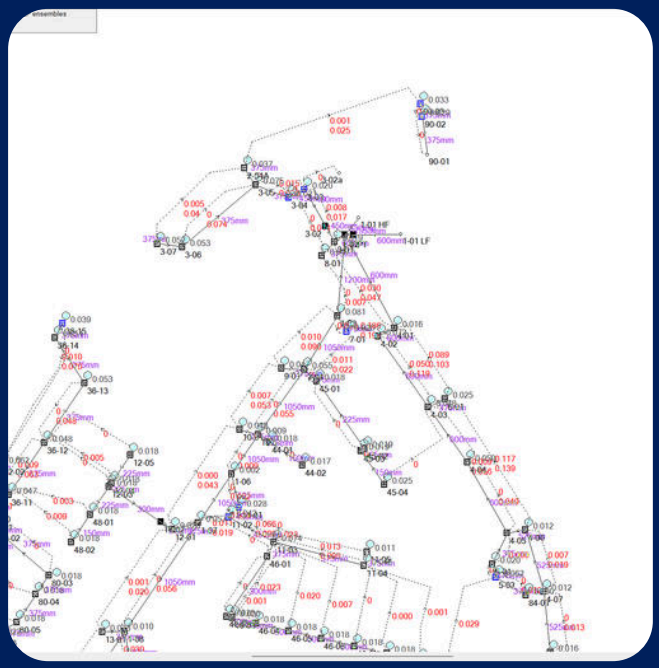

02. No flood impact on neighbouring properties.

03. Council's RFI resolved with a revised flood report, including fencing and building envelopes.

04. Kept in close contact with the client, town planner and Council throughout

Testimonials

“ Stormwater Management

Jocelyn from JOCES is exceptional. She assisted greatly with a very complex council stormwater issue I had with the council. Her professionalism and thorough understanding of all elements surrounding the stormwater issue was a breath of fresh air. I spoke with countless engineers over the last two years, which made the problems seem unresolvable, though Jocelyn understood them quickly and simplified the process greatly. I recommend JOCES for anything stormwater related.

Matthew Ibrahim
Director - *Tetris Build*

TETRISBUILD
Construction and Refurbishment

“ Flood Risk Assessment Report and Stormwater Management Plan

One of our residential development projects recently encountered a major challenge that required a more detailed flood report to progress. We engaged Jocelyn Do and her firm, JOCES, and it has made all the difference.

Jocelyn's expertise, keen attention to detail, and proactive communication helped us navigate a complex situation with confidence. Thanks to the team at Joces, we were able to overcome a significant setback and get this project back on track.

We highly recommend Jocelyn and her team at Joces to anyone needing expert support with flood risk assessment and stormwater design.

Nikhil Parekh
Director - *Springbok Business Services Pty Ltd*

“ Development Engineering Consultancy

Wingecarribee Shire Council has engaged the services of JOCES to undertake development engineering services. We have worked with Ms Do for the past 2 years and during this time found Ms Do to be highly professional and diligent in her advice on civil road and drainage engineering projects.

Adan Davis
Director Communities and Place
Wingecarribee Shire Council

“ Development Engineering Consultancy

Over the past year, we've worked with JOCES on a range of complex development applications and construction certificates, including large-scale subdivisions, commercial supermarket developments and a high volume of infill developments. Their support in stormwater and road infrastructure assessments has been consistently high quality, helping guide key Council decisions. JOCES' proactive and clear communication, has helped us manage technical challenges, set priorities, and meet deadlines confidently and ultimately, more timely planning outcomes for the community.

Their approach is practical, thorough, and collaborative, aligning strongly with their values of Excellence and Communication. They've played a key role in improving our internal workflows and turnaround times, leading to more efficient planning outcomes. We see great value in the partnership and would confidently recommend JOCES to other Councils or developers seeking a reliable, engaged, and technically strong engineering consultancy. Continued documentation refinement and clarity on design assumptions would add even more value, but overall, JOCES has proven to be a trusted and professional asset to our team.
